Hey, I designed and built this Laptop stand from scratch, my main goals for this stand were: It should fit every kind of laptop (even my huge RTX A3000 Laptop and MacBook Pro), It should fit on a fairly normal sized build Plate, It should be 100% 3d printed and sturdy. I printed it with a 0.28mm Layer height and a fast profile and it took around 8 hours to print while only consuming ca. 50g of filament around (85ct) due to the honeycomb design. If you have any questions about the design or how to print it feel free to comment it. Happy printing!
